

You will also find below an additional comment we received by EANM (M. Lassmann):

*"In general, I think is well written (with the exception of the over-emphasis on MC calculations (p.38, challenge B), but I commented on this already before). However what I completely miss is the link to the metrology community and their input to radiation protection as they have they their own research EU organization EURAMET (see attached document).*

*I would urgently suggest trying to combine these efforts and not to allow for parallel developments. The NMIs have a strong background in standardization and it would good to include this in order to strengthen the confidence in the data published in this field.*

*At least it should be mentioned ..."*
